

Slide Deck

A beamer template for lectures

Mani Ebrahimi

Sharif University of Technology

Spring 2026

Panels

A titled panel

- `panel` takes a title as its mandatory argument.
- It breaks across frames, so a long list will not overflow.
- Any `tcolorbox` key goes in the optional argument.

Two panels on one slide

Fixed height

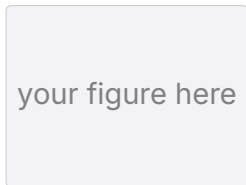

Pass `height` to line up panels that sit next to each other.

Second panel

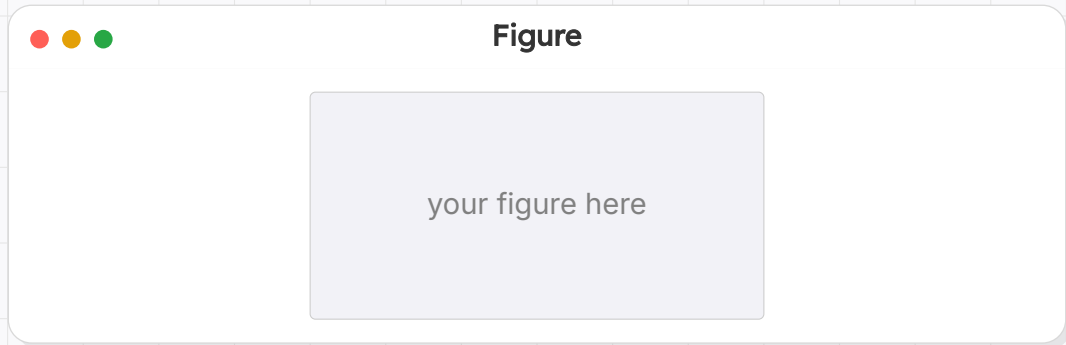

Colours all come from `vars/colors.tex`; change one there and every panel follows.

Split panel

- `panelsplit` splits left and right at `\tcblower`.
- The left column takes a third of the width by default.
- Override it with `[lefthand ratio=0.5]`.

A figure on its own

Blocks and alerts

Definition

Beamer's stock `block` is restyled as a window: tinted title bar, accent title, traffic lights.

Careful

`alertblock` is the same box in the alert colour. Use it sparingly, or it stops meaning anything.

Text and maths

Emphasis

Body text is Inter, headings are Lexend. **Alerted text** picks up the red accent, **bold** and *italic* work as usual.

Display maths sits on the panel background:

$$v_{\text{avg}} = \frac{1}{n} \sum_{i=1}^n p_i$$

CLASS ACTIVITY TIME!

Sketch a class diagram for a library system. Compare yours with the person beside you and explain any differences.

Code blocks

fib.py

```
def fib(n):  
    a, b = 0, 1  
    for _ in range(n):  
        a, b = b, a + b  
    return a
```

Code from a file

Arguments are the title bar text and the path on disk, so the deck never drifts from the code it shows.

code/example.py

```
from functools import lru_cache

@lru_cache(maxsize=None)
def fib(n: int) -> int:
    """Nothing clever. The cache does the work."""
    return n if n < 2 else fib(n - 1) + fib(n - 2)

print([fib(n) for n in range(10)])
```

Another language

report.sql

```
select date_trunc('month', created_at) as month, count(*) as  
    shipped  
from orders  
where status = 'shipped'  
group by 1  
order by 1;
```

Columns

Left

- First level.
 - Second level, hollow.
 - Third level, small square.

Right

Beamer's own `columns` environment needs no styling – put a panel in each column and they line up.

A section divider

Part Two

A quiet slide to break up the deck
